TERMS

All goods listed are offered subject to crop failure and other unavoidable causes; and upon their being unsold upon receipt of order. Prices are not static, but vary, necessarily, according to season and age of plants.

While every care is taken to make our plants strong and healthy, we cannot guarantee them to live, as after treatment and weather conditions are beyond our control. Should any plants be mislabeled we will replace them without charge, upon submission of proper proof; here, however, our responsibility ends.

Unknown correspondents will please send two references if credit is desired; in general we prefer to do business on a cash basis.

Whenever possible it is advantageous for customers to call at the nursery and select their own plants. We make a charge of \$.25 for packing for shipment orders under \$5.00, in order partially to cover this expense. Small packages sent by parcel post; other orders by express, collect. Orders over \$5.00 may be delivered free within five miles, and special arrangements may be made for greater distances. Plants travel at purchaser's risk, as our responsibility ceases upon delivery to the transportation company, in good order.

Visitors are welcome at all times, but we do not take orders on Sunday.

Potted Herbaceous Perennials

We offer specimen plants in pots for filling last minute vacancies

Perennials, Natives and Rock Garden Plants

The following list is made up of herbaceous perennials (and a few biennials) suitable for the border, the rock garden or the wild garden. The plants are strong and well grown; those for the border and wild garden are mostly field grown, while those for the rock garden are mostly pot grown. We have smaller sizes of many of these plants which we can sell for lower prices and specimens or large potted plants at a slightly increased rate; we will be glad to give you further information on these or any other plants in which you may be interested. If we don't list what you want we may have it in small quantities or be able to get it for you—just ask us.

The first name is the botanical name, and the number following it gives the usual height at maturity. The common name is printed in italics, after which is indicated the usual blooming season.
